

## The Town of Nantucket's

Oyster Shell Recycling Program encourages local restaurants, raw bars, oyster growers and the community to save and recycle oyster shells in order to support oyster restoration projects in Nantucket waters. Oyster restoration promotes the growth of Nantucket native oysters, improves water quality, and helps to control erosion. This program focuses on reducing waste, recycles a valuable resource, and provides an opportunity for the community to participate in a sustainable movement.

Did you know one oyster filters around 30 gallons of water a day?
