

Earn incentives and make the grid more efficient by enrolling your battery in **ConnectedSolutions!**

Working together to lower peak energy demand

Your MassSave® sponsor will pay an incentive every summer and winter based on the performance of your battery system during **ConnectedSolutions** events.

ConnectedSolutions pays you for allowing us to discharge your battery when the grid needs it. This helps to reduce the need for expensive grid infrastructure and helps you to earn great incentives.

INCENTIVE PAYMENT

Season	Incentive Rate
Summer	\$225 per kW performed per summer
Winter	\$50 per kW performed per winter

The **ConnectedSolutions** incentives can be paid to either the system owner, or to the battery implementer. Some battery implementers may offer other discounts such as a reduced upfront cost in return for the **ConnectedSolutions** seasonal incentives being paid to the battery implementer. Please check with your battery system implementer for more details.

Select your battery integrator to get started.

Your battery's discharge performance will depend on the size of your battery and your system's configuration. To guide you through this process and help you estimate your earning potential, we have teamed up with the following battery integrators. Please reach out to them to learn more.

Additional Information

- Your MassSave® sponsor will pay the incentive directly to the customer their battery integrator depending on the selection made in the application form. If the customer selects for the incentive to be paid to their battery integrator, how much of this incentive is passed down to the customer depends on the negotiations between the customer and their battery integrator.
- When we call peak events, you don't have to take any action. Your battery system will automatically discharge at the right time.
- During the summer, peak events can happen in June, July, August, and September. However, most events will happen in July and August. We will call 30 to 60 events per summer for two- or three-hour events.
- During the winter, peak events can happen in December, January, February, and March. We will call about 5 events per winter. If a winter storm is forecasted to cause a large number of electrical outages, we will not call events. That way your battery can be ready if the grid goes out.
- If your battery integrator supports it, you can opt out of peak events at any time. However, since incentives are paid based on your battery's average discharge during events, this can affect your incentive.
- ConnectedSolutions and the MA SMART battery incentive work together. Customers are free to pursue both incentives.
- The battery portion of ConnectedSolutions is a one-year demonstration currently. We don't yet know if we will be able to accept new participants into the program after the summer of 2019.
- The battery portion of ConnectedSolutions is not yet available for Unitil and Cape Light Compact customers. Please contact Unitil or the Cape Light Compact to find out more and learn about other ways to save.
